## ABSTRACT

## METHOD AND DEVICE FOR INCREASING THE CAPACITY OF NON-SPREAD TRANSMISSION SYSTEMS

A method for increasing the capacity of signal transmission systems comprising  $N_T$  users, a single-piece receiver receiving the mixture of signals originating from the  $N_T$  users including at least the following steps :

- determining a qualitative information Info(Qs) of the symbols estimated for each of the  $N_T$  users,
- transmitting this information Info(Qs) to a processing block receiving an a priori information and designed to generate a quality information Info(Qbs) on the bits forming the symbols,
- transmitting the Info(Qbs) to a decoding step to obtain a qualitative information on the encoded bits and Info(Qbu) on the useful bits.
